## It's what's on the outside that counts, too.

CladEx is the external cladding system designed to improve the thermal efficiency and overall aesthetic of modular buildings.

minute fire-rating compliant as part of a certified system

percent less cost compared to industry alternatives

weeks potential labour saving on site due to factory fit

The CladEx Innovation range offers sleek, contemporary Metallics and warm, traditional Wood Grains minus the traditional maintenance issues. CladEx can be used as an overlaid system for modular refurbishment projects or as a high-performance external finish for new builds.

# CladEX COMPOSITION

The composite CladEx panel is made up of a thermally-efficient, lightweight, closed-cell core bonded to pre-finished steel.

The long edge folded steel and interlocking hidden-fix joint eliminate the need for T-section cover trims, giving a neater finish in a shorter time.

Rigid extruded ecofoam board

Bonded pre-finished steel

## BENEFITS

Steel performance guaranteed

Durable, abrasion-resistant top coat

60-minute fire rating - As part of a standard modular wall construction

Manufactured in the UK

Factory fit capability - Save up to 3 weeks of site labour

Up to 50% less cost than industry alternatives

Suitable for new builds and refurbishment projects

U-value as low as 0.22 W/m<sup>2</sup>K achievable - As part of a standard modular wall construction

## WOOD GRAIN

Traditional wood cladding emits a warm and welcoming aesthetic but, for purposes of maintenance, longevity and fire safety, steel is the superior choice. Wood Grain CladEx combines the best of both worlds, creating an aesthetic impact that is made to last.

## METALLIC

The sleek, contemporary finish of the metallic CladEx is backed up by its outstanding technical performance. Designed to withstand the harshest of environments, the grained surface of the metallic panel is robust and hard-wearing with a steel guarantee of up to 35 years.
